

TAKE CARE OF OUR EARTH

This half term's topic covers all things environmental. Here are some ideas for you to try at home:

1. Create a fact file about an endangered animal. Look at this link to find out the top ten most endangered animals in the world: [Top 10 Endangered Animals](#) then create a booklet with pictures and information about your favourite.
2. Keep a tally of all the items that your family recycle in a week and turn it into a bar chart, eg plastic bottles, cardboard, glass bottles and jars, paper, tin cans etc. Watch [Come Outside](#).
3. Keep a weather chart for 10 days. Measure how much rainfall there is by collecting it in a beaker each day, and record the amount. Here is a free chart to download, or you could make your own: [Free Weather Chart Printable](#)
4. Find out where your food comes from. Look at packets and tins in the cupboard, and labels on fruit and veg. How far has it travelled? Use an atlas to find out where all the different countries are. Watch this programme: [Farm to Fork](#). How could your family make changes?
5. Have a go at growing some vegetables at home. The easiest ones to try are courgettes, beans, tomatoes, lettuce and strawberries. Here's a link to help you: [5 easy crops to grow](#). Keep a diary to record how they grow, either with photos or drawings. And hopefully you can enjoy a feast at the end!
